1 We Care Dropdown Fix

Commit: 6e22eec

PROBLEM

The 'We Care' dropdown trigger button (hamburger menu icon) was clipped/overflowing past the viewport on real iPhone 12 devices. The header's right-hand icon group needed ~212px but only had ~177–200px available.

FIX

Shrunk icon button sizes (36px → 32px), gaps, language pill padding, and hamburger icon size (32px → 28px) below the **sm** Tailwind breakpoint only. Desktop (≥640px) is pixel-identical to before. This freed ~24px, giving 8px margin on all 4 iPhone 12 variants.

FILES CHANGED

Header.tsx · HeaderActions.tsx · NotificationBell.tsx

2 Full Cross-Device Responsive Audit & Fix

Commit: e230b9d

PROBLEM

After the iPhone 12 fix, residual clipping existed at 320px/360px widths (iPhone SE, Galaxy S8). Also a 640–767px dead zone where We Care was unreachable (hamburger gone at **sm** but desktop popover only appearing at **md**).

FIX

Added a new **xs: 375px** Tailwind breakpoint tier so icons/gaps shrink further below 375px. Changed We Care trigger from **hidden md:block** to **hidden sm:block** to close the dead zone. Verified across 13 viewport widths (320–1440px) with zero clipping.

FILES CHANGED

Header.tsx · HeaderActions.tsx · NotificationBell.tsx · tailwind.config.ts

3 Convert to Hold Feature

Commit: c2df7cc

PROBLEM

When clicking 'Convert to Hold' in the cart, the user was navigated to the product page but the Hold/Reserve modal did not auto-open and the selected size was not carried over.

FIX

The cart already sent **?convertToHold=1&size=XL** query params, but **HoldButton.tsx** never read them. Added a mount-effect that reads the params, validates size against available sizes, pre-sets **selectedSize** and **quantity** state, auto-opens the modal, then cleans the URL.

FILES CHANGED

HoldButton.tsx · cart/page.tsx

4 Mobile PDP Edge-to-Edge Product Gallery

Commit: e0b1701

PROBLEM

Product images on mobile had excessive padding, rounded card borders, and side gutters, making products appear small on mobile screens.

FIX

Removed rounded-card padding/border/margin on mobile using the **lg:** prefix (preserving desktop). Applied **-mx-4 lg:mx-0** to cancel parent container padding. Changed inner padding from **p-4** to **p-0 lg:p-4**. Updated Next.js Image **sizes** breakpoint to match.

FILES CHANGED

ProductImageGallery.tsx · shop/[slug]/page.tsx

5 Dot Pagination Removal — Mobile & Desktop

Commit: ab551a6, 9a5c564

PROBLEM

3-dot pagination indicators overlaid on the product image, obstructing the product view on both mobile and desktop.

FIX

Changed dot container from **visible** to **hidden** at all viewport widths. JSX preserved for future re-enablement. Thumbnail strip below remains the active image indicator.

FILES CHANGED

6 Navigation Links Bold Styling

Commit: d4771ce

PROBLEM

SHOP, SHOP BY STYLE, and SHOP BY PLAYER navigation links were not visually distinct from other nav items.

FIX

Added a **primary** flag to these 3 links in **SubNavBar.tsx**. Primary items get **font-bold** + **text-jays-navy (#134A8E)** + **bg-jays-ice (#F0F4FA)** pill background. Other items remain **font-semibold** + **text-jays-steel**.

FILES CHANGED

SubNavBar.tsx

Items On Hold — Not Completed

● Footer Canadian Flag Repositioning

Intentionally stopped by user.

● Stale Notification DB Cleanup

Paused — customer-facing bug already fixed.
