SESSION 2026-07-26

FEATURE SUMMARY

A concise record of the shipped features and fixes completed in the July 26, 2026 development session — covering PDP size-chart UX, footer/nav navigation cleanup, an admin notification bug fix, and the new City Connect / Championship Gear product-tagging and merchandising system.

Prepared as an internal engineering changelog for this development session

What's Inside

- | | |
|---|---|
| 1 | PDP Size Chart Dropdown |
| 2 | Size Chart Dropdown Responsive Fix |
| 3 | Size Chart Nav-to-Footer Move |
| 4 | Admin → Customer Notification Sync Fix |
| 5 | City Connect / Championship Gear Product Tagging |
| 6 | City Connect / Championship Gear Catalog Identifier |
| 7 | Nav Bar Centering Fix |

All seven items below were designed, implemented, committed, and verified against the live codebase on 2026-07-26. Each entry lists the user-facing value, the technical mechanism, the touched files, and confirmed status.

PDP Size Chart Dropdown

Adds a “Size Chart” trigger directly next to “Select Size” on the Product Detail Page. Clicking it opens an inline, category-aware dropdown showing the correct sizing table (men's/unisex, women's, kids/youth, or hat sizing) for that exact product — so shoppers no longer have to leave the page and lose their place to check sizing on the separate full size-chart page.

Technical Implementation

- New shared data module **sizeChartData.ts** extracts all size tables (mens/womens/kids/hats) out of the existing full /size-chart page so both surfaces stay in sync from one source of truth.
- **resolveSizeChartKinds()** inspects a product's category, productType, hatStyle, and ageGroup fields to pick the right chart(s) automatically.
- New **PdpSizeChart.tsx** client component renders the trigger + dropdown panel and is wired into **ProductDetails.tsx** next to the size selector, with a link out to the full size-chart page.

● **STATUS: Shipped — commit 581b1b2, verified in current codebase**

Size Chart Dropdown Responsive Fix

A same-day follow-up fix to Feature 1: the initial dropdown used a fixed-position panel that clipped or ran off-screen on mobile devices and shorter desktop viewports. The panel now adapts to the device and available space so the chart is always fully visible and readable.

Technical Implementation

- Below the sm breakpoint the panel renders as a **fixed bottom-sheet** (full-width, rounded top corners, backdrop overlay) — always viewport-safe regardless of trigger position.
- On tablet/desktop it renders as a **right-anchored panel** next to the trigger instead of a fixed left offset.
- A `useLayoutEffect` collision-detection routine measures space above/below the trigger, flips the panel **above** the trigger when there isn't enough room below, and clamps its **max-height** to the available space with an internal scrollable content area.

● **STATUS: Shipped** — commit `4aec47e`, verified in current codebase

Size Chart Nav-to-Footer Move

The global “Size Chart” link previously lived in the main site navigation bar on every page. Since Feature 1 now surfaces sizing directly on product pages where it’s actually needed, the standalone nav link was moved into the footer to reduce nav-bar clutter while keeping the full size-chart page easily reachable from anywhere on the site.

Technical Implementation

- Removed the **Size Chart** entry from the links array in **SubNavBar.tsx**.
- Added a matching **Size Chart** link (with icon) to the footer’s secondary navigation column in **Footer.tsx**, alongside Discounts, Product Concerns, and Our Heritage.

● **STATUS: Shipped** — [commit 86477e2](#), [verified in current codebase](#)

Admin → Customer Notification Sync Fix

Fixed a data-integrity bug: when an admin un-flagged a product's "New Arrival" status, the customer-facing notification bell kept showing a stale "New Arrival!" alert for a product that was no longer new. This eroded trust in the notification feed and could point customers at outdated product framing.

Technical Implementation

- Root cause: the admin product update route only handled the **flag-on** transition (creating a CustomerNotification row) and never handled the **flag-off** case.
- Fix adds an else if branch in the PATCH handler: when isNewArrival transitions from true to false, all matching notification rows for that product are deleted via `customerNotification.deleteMany()`.
- Same cleanup was extended to product **archive** and **delete** flows so no stale notification can ever outlive its product.

● **STATUS: Shipped** — commit `a5a0da3`, verified in current codebase (`route.ts` lines 148-164)

Files

`src/app/api/admin/products/[id]/route.ts`

City Connect / Championship Gear Product Tagging

Introduces two new admin-manageable product tags — “City Connect” and “Championship Gear” — so specific products can be curated into their own themed collections. The About page’s two existing promotional buttons (“Shop City Connect” / “Shop Championship Gear”) now link to live, filtered shop views that show only correctly-tagged products and update automatically as tags change.

Technical Implementation

- New `isCityConnect` / `isChampionshipGear` boolean fields added to the **Product** model in `prisma/schema.prisma` (default false), with a migration.
- New checkbox toggles in **EditProductModal.tsx** let admins flag a product either way; the admin products list/API (`route.ts`, `[id]/route.ts`) read/write both fields.
- **ShopPageClient.tsx** filters the catalog by these booleans when the URL category is `city-connect` or `championship-gear`.
- A self-healing Prisma extension in **lib/prisma.ts** auto-adds the two columns in production via `ALTER TABLE ... ADD COLUMN IF NOT EXISTS` if a deploy runs ahead of a full migration.

● **STATUS: Shipped** — commits [7bbd7ec](#) / [477b38e](#) / [215e9b0](#), verified in current schema, API, and UI code

```

City Connect / Championship Gear Catalog Identifier

Adds distinct, on-brand banners to the filtered shop views at `/shop?category=city-connect` and `/shop?category=championship-gear`, so each themed collection is visually distinguished the moment a fan lands on it, reusing the same branding and logos already established on the About page.

Technical Implementation

- Extended the existing **CategoryBanner.tsx** config map with two new entries — 'City Connect' (navy-to-red gradient, CN Tower/transit theming, City Connect Fridays logo) and 'Championship Gear' (navy/royal gradient, 1992 & 1993 World Series rings logo).
- Each banner config carries its own eyebrow text, headline, subtitle copy, tag chips, and CTA label, matching the visual language of every other shop category banner.
- `bannerKey()` alias resolution maps the URL slugs `city-connect` / `championship-gear` to the correct banner config automatically.

● **STATUS: Shipped** — [commit cd6283e](#), verified in current **CategoryBanner.tsx**

Nav Bar Centering Fix

Fixed a visual bug where the main sub-navigation bar (Home, Shop, Shop by Style, Players, Brands, Gallery, etc.) rendered left-aligned on desktop with a large, awkward empty gap on the right side of the screen, rather than sitting centered like the rest of the site's layout.

Technical Implementation

- Root cause: a prior attempt used the Tailwind arbitrary class `justify-[safe_center]`, which Tailwind 3.4.1 cannot compile (it doesn't emit CSS for multi-keyword bracket values), so it silently produced no centering at all.
- Replaced with an overflow-safe wrapper pattern: the scrollable outer container uses `justify-start`, while the inner flex row of nav items uses `w-max mx-auto` to center itself when it fits, while still allowing horizontal scroll/overflow on narrow mobile viewports.

● **STATUS: Shipped** — **commit 0384896**, verified in current `SubNavBar.tsx` (line 58)
